

Janaka Premathilaka

Senior Full-Stack Java Engineer

Zug, Switzerland

I build rock-solid enterprise Java systems and lead them into the AI era. With 21+ years delivering mission-critical banking and public-sector software, I focus on automation that moves the needle—LLMs, RAG, LangChain, Crew AI, LangGraph, AutoGen, OpenAI Agent SDK with Spring Boot. I'm known for calm, dependable execution: I steady teams, cut through noise, and get results. From modernizing legacy stacks to boosting trading-platform performance, I finish what I start—no shortcuts. Today I bridge proven enterprise tech with practical AI to deliver solutions that work in the real world. My principle is simple: find a way—or make one.
